¹⁾ Place probe tip in the center of the pipe to ensure the highest measurement accuracy.

²⁾ The measuring range limit value depends on the medium used.

³⁾ At medium temperatures above 100 °C, the distance between the bottom of the housing and the top of the process connection adapter must be at least 25 mm. If a SICK process connection adapter is used, the 60 mm probe cannot be used at process temperatures above 100 °C because the distances cannot be maintained.

⁴⁾ According to the Pressure Equipment Directive 2014/68 / EU: Good engineering practice, according to Article 13 for media of media group 2 (other substances).
