| Risk time | 80 ms ^{1) 3)} |
| Switch-on time | 2.5 s ⁴⁾ |

¹⁾ In a safe series connection, each downstream safety switch increases the system response time. More response times can be found in the operating instructions.

²⁾ Response time on approach to the enable zone.

³⁾ Detection time for internal oder external faults (e.g., short-circuit or cross-circuit of output signal switching devices). Follow the detailed information in the operating instructions.

⁴⁾ The time specified applies to one sensor after the supply voltage has been applied to the safety switch. In a safe series connection, 0.1-s must be added for each sensor. An additional 0.5-s per taught-in actuator must be added for uniquely coded and permanently coded sensors.

Sensor with cable and male connector

"Standard" actuator

Response range

"Standard" actuator, active front sensor surface

Assured switch on distance S_{a0} 10 mm. Observe border areas for parallel approach: a minimum distance of 6 mm (typical) must be upheld when the actuator moves laterally to the sensor surface. This prevents early triggering due to the side preparation areas. "Standard" actuator, active side sensor surface

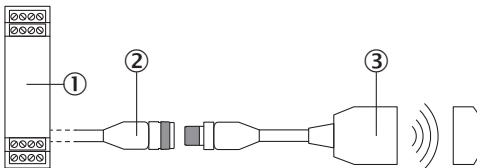

Safe switch on distance S_{a0} 6 mm
